

Summer Watering Program (Estimated Sewer Volume Charges)

UPDATED CHANGES:

- Residential users may elect to have their sewerage volume service charges for the months of June, July and August estimated based upon an average of water usage. This estimated amount of water usage will be calculated by averaging three months of usage when the residence is occupied.
- Written election must be made prior to April 30th. Once written election has been made, the five dollar (\$5.00) yearly processing fee will automatically be included each year on the June utility bill in the form of a miscellaneous charge until written notice to revoke by the user is submitted.
- Once the user elects this program, the estimated usage shall be in effect for the usage months of June, July and August.
- If a residential home is not occupied for six (6) months, a minimum sewerage charge of 1,000 gallons will be charged for June, July and August.
